Queen's University – Department of Economics

ECONOMICS 452* -- Fall Term 2011

APPLIED ECONOMETRICS

Fall Term 2011

Instructor: Mike Abbott
Office: Room A521 Mackintosh-Corry Hall
Tel: 613-533-2298
Fax: 613-533-6668
E-mail: abbott@econ.queensu.ca

Web Site: http://www.econ.queensu.ca/pub/faculty/abbott/econ452/

Time Slot 51: Mondays, 2:30 p.m. – 3:50 p.m.
Thursdays, 4:00 p.m. – 5:20 p.m.

Office Hours -- Fall Term 2011 (Tentative):

♦ Mondays 4:00 p.m. – 5:30 p.m.
♦ Wednesdays 12:00 p.m. – 1:30 p.m.
Secretary: Elaine Constant  
Office: Room 207 Dunning Hall (inside Dunning Hall 209)  
Tel: 613-533-2252  
Fax: 613-533-6668  
Email: constant@econ.queensu.ca
Purpose and Organization

The purpose of the course is to help students learn to use econometric methods in empirical economic research. The course focuses exclusively on econometric models and methods designed for analysis of cross-sectional data. It emphasizes problems that arise in actually conducting applied econometric research on cross-sectional data, and modern methods and practices for dealing with these problems. Empirical examples – many drawn from recent literature in applied economics – are presented to illustrate the application of all econometric methods covered in the course.

Course material is presented in both scalar and matrix terms. Extensive use is made of matrix algebra in the presentation of econometric methods and results.

Learning Objectives

Upon successful completion of the course, students should have acquired the methodological, operational and expositional skills required to design and conduct a small-scale econometric investigation and to write an accurate, complete and coherent report of its methods and findings. They should also have developed the capacity to comprehend and critically assess applied econometric studies based on cross-sectional data.
Course Format

The course is based on two 80-minute lectures per week. In addition, hands-on tutorials are scheduled in the Department of Economics Computer Classroom (Dunning Hall 350) at times to be arranged. The tutorials are designed to familiarize students with those features of the statistical software program Stata they will need for the assignments in the course.
Course Work and Assessment

- Assignments: Two Research Projects

Two assignments will be given during the term. These assignments will require students to perform small econometric research projects that apply the various econometric methods and practices covered in the course.

The assignments will be goal-specific rather than task-specific in nature. That is, they will specify broad research objectives, a general empirical or econometric framework, and a dataset for each project, but will not specify in detail how the objectives are to be achieved or how the empirical framework is to be implemented. Students will therefore be responsible for formulating a specific research design for achieving the research objectives of each project, for deciding what specific empirical results are reported and how they are presented and interpreted, and for writing an accurate, complete, coherent and well-documented project report. The required format for each project report is that of a short economics journal article.

Students are not only permitted, but encouraged, to work in pairs in researching, writing and submitting the two assignments. However, provided that final course enrolment does not exceed 24, students have the option of doing assignments individually if they wish to do so.

- Mid-Term and Final Exam: There will be NO mid-term or final exam in the course.
Final Course Grade

Each student's final course grade will be computed using the following weights for the two course components:

<table>
<thead>
<tr>
<th>Assignment 1</th>
<th>50 %</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assignment 2</td>
<td>50 %</td>
</tr>
</tbody>
</table>

Course Work Schedule

- **Assignment 1 (Fall Term 2011)**
  
  DISTRIBUTION DATE: Thursday September 22, 2011
  
  DUE DATE: THURSDAY NOVEMBER 3, 2011
  
  Assignments submitted AFTER the penalty-free due date will be penalized 10 percentage points per day.

- **Assignment 2 (Fall Term 2011)**

  DISTRIBUTION DATE: Monday November 7, 2011
  
  DUE DATE: TUESDAY DECEMBER 6, 2011
  
  Assignments submitted AFTER the penalty-free due date will be penalized 10 percentage points per day.
Major Steps in an Econometric Research Project

**Step 1:** Formulate a methodologically sound *research design*, or *research plan*, that effectively utilizes the available sample data to provide *credible and complete empirical evidence* on the empirical question(s) you are investigating.

Requires knowledge and understanding of both

(1) the **principles of econometric model specification**, and

(2) the **methods of estimation and inference** in econometric models.

**Step 2:** Execute the *research plan* in accordance with good econometric practice – i.e., conduct the econometric analysis required to assemble *credible and complete empirical evidence* on the empirical question(s) you were asked to investigate.

Requires a good working knowledge of both econometric methods and econometric software.
Step 3: Write an accurate, complete, and logically coherent research report in which you fully and accurately explain what you did, how you did it, and what you found.

Explaining what you did and how you did it involves:

- Describing the sample data you used;
- Specifying the econometric models you estimated;
- Identifying the estimation methods you used;
- Specifying the hypothesis tests you performed on each model.

Reporting what you found involves:

- Tabulating the results of your econometric analysis, including the coefficient estimates of all reported models and the results of all hypothesis tests performed on these models;
- Interpreting and explaining the results of your econometric analysis;
- Assessing the strength of the evidence you obtained on the empirical questions you were asked to investigate;
- Identifying limitations of your analysis and suggestions for further research.

Requires excellent organizational and technical writing skills.
A Template of an Econometric Research Paper

Body of Paper

Title Page

1. Introduction

2. Literature Review

4. Empirical Methodology and Data Description

5. Characteristics of Refugees and Economic Immigrants

6. Empirical Results

Tables

Appendix
Cortes' Econometric Model: A Linear Regression Model

**Regression Model:**

\[
\ln(\text{annearn}_{i,t}) = \alpha_0 + \alpha_1 D^{1990} + \alpha_2 D^{\text{Refugee}} + \alpha_3 D^{1990}\ D^{\text{Refugee}} + X_{i,t} \gamma + \beta_0 \text{Low}_\text{Eng} + \beta_1 \text{Low}_\text{Eng}^{1990} + \text{Educ}_{i,t} \theta + u_{it}
\]

**(7)**

**Variable Names and Definitions:**

- \(\ln(\text{annearn})_{i,t}\): the natural log of annual wage and salary earnings for person \(i\) in year \(t\);
- \(D^{1990}\): a dummy variable indicating the 1990 census year;
- \(D^{\text{Refugee}}\): a dummy variable indicating a refugee immigrant;
- \(D^{1990}D^{\text{Refugee}}\): an interaction of refugee status and the 1990 census dummy;
- \(X_{i,t}\): a vector of control variables (age, \(age^2\), \(age^3\), \(age^4\), region, marital status);
- \(\text{Low}_\text{Eng}\): a dummy variable indicating low English ability;
- \(\text{Low}_\text{Eng}^{1990}\): a dummy variable indicating low English ability in 1990;
Educ\textsubscript{i,t} = a vector of educational attainment dummy variables (kindergarten, 1\textsuperscript{st}-4\textsuperscript{th} grade, 5\textsuperscript{th}-8\textsuperscript{th} grade, 9\textsuperscript{th} grade, 10\textsuperscript{th} grade, 11\textsuperscript{th} grade, 12\textsuperscript{th} grade, 1 to 3 years of college, 4 plus years of college);

u\textsubscript{it} = a random error term, which represents all the unknown, unobservable and unmeasured factors that determine the individual population values of the regressand Ln(annearn)\textsubscript{i,t}.  

Mini-Assignment 1 on Cortes (2001) Paper

In no more than two sentences, answer the following question:

**Question:** What is the primary *empirical* question addressed in the Cortes (2001) paper?

**Due Date:** Thursday September 22, 2011 (not marked)
Textbooks: Recommended

*Required Textbook:* There is NO required textbook for this course.

*Recommended Textbook*

The *recommended textbook* for the course is the fourth (2009) or third (2006) edition of the introductory textbook by Jeffrey Wooldridge:

This book provides excellent modern treatments of all topics included in the course. It also contains plenty of real applications of econometric methods. Used copies of Wooldridge (2009) can be purchased at the Campus Bookstore Used Books website, and 1 copy of Wooldridge (2006) is on reserve in Stauffer Library Reserve Room.

**Queen's University Campus Bookstore Prices for Wooldridge (2009):**

- New Book Price: $170.54 (1 in stock)
- 8 Classified Listings: $40.00 to $100.00  [http://www.campusbookstore.com/Textbooks/UsedBooks/Buy/](http://www.campusbookstore.com/Textbooks/UsedBooks/Buy/)
Other Recommended Textbooks

The following three textbooks are recommended for supplementary reading.

A standard textbook in introductory econometrics, Gujarati (2003) provides clear expositions of many of the topics covered in the course.

The Griffiths, Hill and Judge (1993) book provides accessible, user-friendly and moderately advanced treatments of most of the topics included in the course.

Berndt (1991) is an excellent "hands-on" textbook in applied econometrics; it emphasizes the implementation of econometric techniques in real empirical applications.
Computer Software

The required econometric software package for the course is *Stata/IC*. The current release of *Stata for Windows* is Release 12 (*Stata 12*), but Release 11 (*Stata 11*) is perfectly adequate for purposes of this course.

The *Stata* web site is at: [www.stata.com](http://www.stata.com).

*Stata tutorials* distributed during the term on the course web site will give students hands-on instruction in those features of *Stata* required to implement the econometric methods covered in the course and to do the two research assignments. In addition, scheduled computing labs in the Department of Economics Computer Classroom (Dunning Hall 350) will give students the opportunity to obtain individual assistance with both the computer tutorials and the research assignments.
**Stata 11 or Stata 12 for Windows** will run under Windows 7, Windows Vista, Windows XP and Windows 2000. Students with their own PCs may wish to acquire a PC version of *Stata* suitable to their hardware.

Two basic versions of *Stata 12* are available:

**Small Stata** – *Stata 12* for small computers
- Datasets are restricted to a maximum of 99 variables and 1,200 observations.
- Matrices may be up to 40 x 40.
- Maximum number of right-hand variables = 99
- String variables up to 244 characters.
- Computer should have at least 512 MB of RAM and 500 MB of disk space.

**Stata/IC** -- the standard professional version of *Stata 12*
- A maximum of 2,047 variables; the only limit on observations is the amount of RAM on your computer.
- Very fast.
- Matrices may be up to 800 x 800.
- 64-bit version available.
- Maximum number of right-hand variables = 798
- String variables up to 244 characters.
- Computer should have at least 512 MB of RAM and 500 MB of disk space.

*Stata/IC* is the required version of *Stata 11* or *Stata 12* for this course. Small Stata's restrictions on dataset size would prove to be binding for the research assignments in the course. *Stata/IC 12* is available for Windows, Mac and Unix platforms.
Hard Copy Documentation for Stata 12

Core hard copy documentation for Stata 12 consists of five manuals (approximate prices in US dollars):

- Getting Started with Stata for Windows ($25.00) or Getting Started with Stata for Mac ($25.00);
- User’s Guide ($45.00);
- Base Reference Manual (4 volumes, $185.00);
- Graphics Reference Manual ($60.00);
- Data Management Reference Manual ($55.00).

The first two manuals are particularly useful for relatively new Stata users.

Complete information on Stata 12 documentation is available from the Stata web site at http://www.stata.com/bookstore/docset.html.
Purchasing your own copy of the Stata/IC 12 statistical software

The course instructor has set up a plan – called a Stata course GradPlan – whereby students can purchase their own copies of the Stata/IC 12 statistical software and documentation at special student discount prices.

Students who wish to take advantage of this GradPlan should send an e-mail message to the instructor with their full name and student number, who will send them instructions on how to proceed.

Course GradPlan Student Prices for Stata/IC 12 (in U.S. dollars)

Background Preparation for ECON 452*

It is assumed that students have successfully completed an introductory undergraduate econometrics course such as ECON 351*, and an introductory university-level calculus course such as MATH 126 or MATH 121.

Since extensive use is made of matrix algebra, a selective review of basic concepts in matrix algebra may be advisable. For a brief review of matrix algebra, see either Wooldridge (2009), Appendix D, pp. 788-797 or Wooldridge (2006), Appendix D, pp. 808-818.
COURSE OUTLINE AND READINGS

NOTE: All readings in Wooldridge (2009, 2006) are required. In addition, lecture notes for several sections of the course are posted on the course web site in PDF format.

1. SPECIFICATION ISSUES IN LINEAR REGRESSION MODELS

A. Theoretical Specification of the Classical Linear Regression Model

B. Selection of Regressors

1. Exclusion of Relevant Regressors: Omitted Variables Bias

2. Inclusion of Irrelevant Regressors
C. Functional Form of the Regression Function

Wooldridge (2009). Ch. 2, Sec. 2.4, pp. 41-46; Ch. 6, Sec. 6.2, pp. 189-199; Ch. 9, Sec. 9.1, pp. 300-306.
Wooldridge (2006). Ch. 2, Sec. 2.4, pp. 44-50; Ch. 6, Sec. 6.2, pp. 197-206; Ch. 9, Sec. 9.1, pp. 304-310.

1. Marginal Effects of Continuous Explanatory Variables: Constant or Variable?
   NOTE 3: Marginal Effects of Continuous Explanatory Variables: Constant or Variable?

2. Functional Form in the Variables: Linear or Logarithmic?
   NOTE 4: Functional Form in the Variables: Linear or Log?

D. Coefficient Differences and Dummy Variable Regressors

NOTE 5: Using Dummy Variable Regressors for Two-Category Categorical Variables.
NOTE 6: Using Dummy Variable Regressors for Multi-Category Categorical Variables.
NOTE 7: Dummy Variable Interaction Terms.
NOTE 8: A General Regression Model with Dummy Variable Interactions.
2. OLS ESTIMATION OF THE LINEAR REGRESSION MODEL: MATRIX FORMULATION

NOTE 9: OLS Estimation of the Classical Linear Regression Model: Matrix Notation and Derivations. 
Wooldridge (2009). Ch. 3, Sec. 3.2, pp. 73-83; Appendix E, Sec. E.1, pp. 799-801. 
Wooldridge (2006). Ch. 3, Sec. 3.2, pp. 78-89; Appendix E, Sec. E.1, pp. 819-822.

3. INFERENCE (HYPOTHESIS TESTING) IN THE LINEAR REGRESSION MODEL: REVIEW AND EXTENSIONS

Wooldridge (2009). Ch. 3, Secs. 3.4-3.5, pp. 94-104; Ch. 4, pp. 117-159; Appendix E, Sec. E.3, pp. 805-807. 
Wooldridge (2006). Ch. 3, Secs. 3.4-3.5, pp. 99-109; Ch. 4, pp. 123-167; Appendix E, Sec. E.3, pp. 826-827.

4. LINEAR REGRESSION MODELS WITH HETEROSKEDASTIC ERRORS

A. Consequences of Heteroskedastic Errors for OLS Estimation and Inference

NOTE 11: Heteroskedasticity-Robust Inference in Linear Regression Models Estimated by OLS. 
Wooldridge (2009). Ch. 8, Sec. 8.1, pp. 264-265. 

B. OLS With Heteroskedasticity-Robust Inference

NOTE 11: Heteroskedasticity-Robust Inference in Linear Regression Models Estimated by OLS. 
C. Tests for Heteroskedastic Errors

D. GLS Estimation of Heteroskedastic Errors Models

Wooldridge (2009). Ch. 8, Sec. 8.4, pp. 276-290.

5. MAXIMUM LIKELIHOOD ESTIMATION OF LINEAR REGRESSION MODELS

A. Fundamentals of Maximum Likelihood Estimation

B. ML Estimation of the Classical Normal Linear Regression Model

NOTE 13: Maximum Likelihood Estimation of the Classical Normal Linear Regression Model.
6. BINARY DEPENDENT VARIABLES MODELS

A. OLS Estimation: The Linear Probability Model

Wooldridge (2009). Ch. 7, Sec. 7.5, pp. 246-251; Ch. 8, Sec. 8.5, pp. 290-293.
Wooldridge (2006). Ch. 7, Sec. 7.5, pp. 252-257; Ch. 8, Sec. 8.5, pp. 295-297.

B. Probit and Logit Models: Basic Features

NOTE 14: Maximum Likelihood Estimation of Binary Dependent Variables Models: Probit and Logit.

C. ML Estimation of Probit and Logit Models

NOTE 14: Maximum Likelihood Estimation of Binary Dependent Variables Models: Probit and Logit.

D. Interpreting Probit and Logit Coefficient Estimates

E. Statistical Inference in Probit and Logit Models

NOTE 16: Testing Linear Coefficient Restrictions in Probit Models.
